

ME 575: Final Project Supplemental Form

1. Please describe in detail your role in the project as well as that of each of your team members. Provide an approximate **percentage** breakdown in effort for yourself and the rest of your team members. I don't expect a perfectly equal balance, but you will lose points for a significantly lower contribution as compared to the rest of your team. If you worked by yourself you can skip this question.
2. Please describe in detail any contributions or advisement you received from others for this project (e.g., from a professor), and describe in detail any work you incorporated that was performed prior to this class. To be clear, there is nothing wrong with getting advisement from others, in fact getting advisement is a very good thing. Similarly, building off of work you or others performed prior to class is also a great thing to do. The intent of this question is to make sure your project was properly scoped and that I am giving you credit only for the portions of the project that **your team** worked on **this** semester.
3. I would like to be able to share your final report with future students as an example. Do I have your permission to post your final report online and/or make it available by other means? If you would like to make it available but on a more restricted basis then please provide additional comments to explain (e.g., wait one/two year(s) to allow for publication, can share online internal to BYU but not publicly, in paper-form in my office only, etc.). It should go without saying, but your answer will have no impact on your grade.
